**Michael J. Leboffe : A Photographic Atlas of Histology** before purchasing it in order to gage whether or not it would be worth my time, and all praised A Photographic Atlas of Histology:

Designed for use in undergraduate histology and human anatomy courses, this atlas contains over 550 high-quality photomicrographs of human tissues and organs. The photomicrographs presented in this atlas were prepared from slides readily available from large biological supply companies to match as closely as possible what students will see in the laboratory. In addition to the photomicrographs, illustrations and diagrams are used throughout the atlas to clarify histological concepts.
