Ladislaus Szymonowicz Sqymonowicz : A Text-Book of Histology and Microscopic Anatomy of the Human Body, Including Microscopic Technique (Classic Reprint) before purchasing it in order to gage whether or not it would be worth my time, and all praised A Text-Book of Histology and Microscopic Anatomy of the Human Body,

Including Microscopic Technique (Classic Reprint):

American edition an effort has been made to place at the command of English-speaking instructors and students a text-book which includes the best results of recent investigations. The spirit and characteristic features of the German original have been carefully retained, changes in text or illustration being made only where some definite advantage was to be attained. These changes have mostly resulted in enlargements. Thus ten of the German engravings have been replaced with thirtyfive new ones, taken from various sources. These can be identified by the credits given in connection with the respective figures. Many additions have likewise been made in the text. I am especially indebted to Dr. Florence R. Sabin for a brief description of the medulla and midbrain. Nearly all of the drawings which have been taken from the German edition were made by Dr. Baracz from material prepared by the author, who acknowledges the assistance also of Dr. Bochenek, Professor Browicz, and Dr. R. Krause. It has been my object throughout to trace, as far as possible, the development of the organs and the histogenesis of the tissues, and it is hoped that the attention of instructors and students may be drawn to the importance of viewing Histology from this standpoint. I have endeavored, also, to emphasize the fact that in many organs it is possible to recognize structural units which are repeated in a definite way and bound together by a characteristic framework. I am much indebted to Professor F. P. Mall for the kind interest he has taken in the preparation of this edition. JOHN BRUCE MACCALLUM.
