Bruce J. Colbert, Jeff J. Ankney, Karen Lee : Anatomy, Physiology, and Disease: An Interactive Journey for Health Professions (2nd Edition) before purchasing it in order to gage whether or not it would be worth my time, and all praised Anatomy, Physiology, and Disease: An Interactive Journey for Health Professions (2nd Edition):

4 of 4 people found the following review helpful. Great book - confusing website with it.By P. RobbinsThis is a great basic physiology book. Most of the time we are told what books to buy anyway from our professor. This book says it comes with a website to use for exercises etc. The website is in the book and it says you need a code that should come with the book. It does not come with the book. You must go to the website and choose the type of book you are using and then find this book and a code is provided. It is pretty confusing but if you stick with it you can figure it out. The exercises and videos are great help they just need to make the website more friendly. It is free so what the heck.1 of 1

people found the following review helpful. I'm keeping this for future reference. By chelleI needed this textbook for school. I love the way the information is laid out. Makes it easy to retain. I ended up with a B grade for my anatomy and physiology class. 2 of 2 people found the following review helpful. It is really easy to understand! By Beatrice RamirezI rated this book with 5 stars because it is very easy to read and understand the material. I love the pictures in the book because they help you have a visual of the things you are learning about. I recommend this book for anyone that is interested in learning about the anatomy and physiology of our human bodies in a summary type.

This engaging, conversational book introduces all the anatomy, physiology, and pathology concepts that students must master to succeed in the health professions. **ANATOMY, PHYSIOLOGY, DISEASE: AN INTERACTIVE JOURNEY FOR HEALTH PROFESSIONS, 2/e** is designed to promote true understanding, not mere memorization, and to help students make the lasting connections they need to thrive as practitioners. Throughout, well-placed "Pathology Connections" sections tightly link AP concepts to pathologic processes. Analogies help students compare the human body to objects and processes they already understand, and illustrations and visual features support the visual learning style many of them prefer. This edition adds new web-based animations, videos, and interactive exercises to its fully integrated website. It also offers an easier-to-navigate text design; enriched illustrations and new photographs; and a new chapter on biochemistry.

About the Author Bruce Colbert is the Director of the Allied Health Department at the University of Pittsburgh at Johnstown. He holds a Masters in Health Education and Administration, has authored four books, written several articles, and given over 175 invited lectures and workshops at both the regional and national level. Many of his workshops provide teacher training involving techniques to make the health sciences engaging and relevant to today's students. In addition, he does workshops on developing effective critical and creative thinking, stress and time management, and study skills. He is an avid basketball player, even after three knee surgeries, which may indicate he has some learning difficulties. Jeff Ankney is the Director of Clinical Education for the University of Pittsburgh at Johnstown Respiratory Care program where he is responsible for the development and evaluation of hospital clinical sites. In the past, Jeff has served as a public school teacher, Assistant Director of Cardiopulmonary Services, Program Coordinator of Pulmonary Rehabilitation, and a member of hospital utilization review and hospital policy committees. He is a consultant on hospital management and pulmonary rehabilitation concerns. Jeff was also the recipient of the American Cancer Society Public Education Award. Karen Lee is an Associate Professor in the Biology Department at the University of Pittsburgh at Johnstown, where she teaches all the anatomy courses, including Anatomy and Physiology for Nursing and Allied Health students. She presents regularly at scientific conferences and has published several articles on crustacean physiology and behavior. An active member of the Council on Undergraduate Research, she is also the chair of the University of Pittsburgh at Johnstown's annual undergraduate symposium.
