**From Academic Press : Applications of Artificial Intelligence, Volume 47 (Advances in Computers)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Applications of Artificial Intelligence, Volume 47 (Advances in Computers):

Since its first volume in 1960, *Advances in Computers* has presented detailed coverage of innovations in hardware and software and in computer theory, design, and applications. It has also provided contributors with a medium in which they can examine their subjects in greater depth and breadth than that allowed by standard journal articles. As a result, many articles have become standard references that continue to be of significant, lasting value despite the rapid growth taking place in the field. Volume 47 contains seven chapters. The first four cover artificial intelligence, which is the use of technology to perform tasks generally assumed to require human thinking. These chapters present natural language processing, visualization, and self-replication as machine implementations of human activities. The remaining three chapters cover other recent advances that are important to the information processing field.

Praise for the Series "Mandatory for academic libraries supporting computer science departments."--CHOICE Excerpt.
