From Humana Press : Arthritis Research: Volume 1: Methods and Protocols (Methods in Molecular Medicine) before purchasing it in order to gage whether or not it would be worth my time, and all praised Arthritis Research: Volume 1: Methods and Protocols (Methods in Molecular Medicine):

This is a compendium of data pertinent to the methods and protocols that have contributed to recent advances in molecular medicine in general, but to the molecular basis of rheumatic disease in particular. These volumes details novel technologies, some of which are still evolving and whose impacts are yet to be determined. Leaders in the field contribute to cover exciting and cutting edge topics. This compendium will be a valuable tool.

From the reviews: "...offers a comprehensive reference for the analysis of tissues relevant to arthritis research in brief chapters that emphasize how various analyses are performed. What separates this series from other references in this area is its ability to be brief but thorough in the discussion of technically challenging methods." -Doody's Book , Weighted Numerical Score:95 - 4 Stars "This multiauthored compendium of arthritis research methods and protocols provides pertinent practical information for the bench researcher as well as for the interested clinician. It is a worthwhile reference to have in the research laboratory . I enthusiastically recommend and believe this publication would have broad appeal to the rheumatologic community and to those in related specialties. I congratulate the authors on developing an excellent compendium of arthritis research ." (Robert J. Quinet, JAMA, April, 2008) "Arthritis Research: Methods and Protocols forms part of a book series on Methods in Molecular Medicine by Humana Press. Overall the books are extremely useful as both a practical guide and a reference text and are easy to understand. We would recommend the books to anyone with an interest in rheumatology research basic scientists, clinicians and students ." (Leonie Taams and Hayley Evans, Immunology News, August, 2008)
