T.J.H. Clark, Tak Lee, Simon Godfrey, Neil Thomson : Asthma before purchasing it in order to gage whether or not it would be worth my time, and all praised Asthma:

Considered by many to be THE text on asthma, this eagerly awaited revision is a comprehensive update of the previous edition retaining the popular readable style and manageable format of its predecessors. The contents have been expanded to reflect recent advances in the field, with important new chapters on the genetics of asthma, education for both the patient and health professional, and the relationship between asthma and allergy.

The fourth edition of *Asthma* will continue to offer concise, sound, practical guidance on all aspects of asthma management and will remain an invaluable resource for general and trainee physicians as well as the specialist chest clinician. *Journal of Investigational Allergology*
