From CABI : Biological and Environmental Control of Disease Vectors before purchasing it in order to gage whether or not it would be worth my time, and all praised Biological and Environmental Control of Disease Vectors:

Covering the theory and practice of non-insecticidal control of insect vectors of human disease, this book provides an overview of methods including the use of botanical biocides and insect-derived semiochemicals, with an overall focus on integrated vector management strategies. While the mainstay of malaria control programs rely on pesticides, there is a resurgence in the research and utilization of non-insecticidal control measures due to concerns over rapid

development and spread of insecticide resistance, and long-term environmental impacts. This book provides examples of successful applications in the field and recommendations for future use.

About the Author Mary M. Cameron is at the London School of Hygiene and Tropical Medicine. Lena M. Lorenz is with the London School of Hygiene and Tropical Medicine.
