**Alan McHughen : Biotechnology Food for Canadians** before purchasing it in order to gage whether or not it would be worth my time, and all praised Biotechnology Food for Canadians:

This book provides an opportunity for curious if perhaps anxious consumers to understand the basics of biotechnology. It also examines some of the issues at the forefront of the public debate: Do genetically modified foods

prevent a hazard to human or animal health? Alan McHughen is a public-sector educator, scientist and consumer advocate. A molecular geneticist with an interest in crop improvement, he has helped develop Canada's regulation covering the environmental release of plants with novel traits. He is currently acting Chair on the International Society for Biosafety Research and serves on a panel of the U.S. National Academy of Sciences that is reviewing the American regulatory framework for genetically engineered plants.

About the Author Alan McHughen is a public-sector educator, scientist and consumer advocate.
