**Allan C. Somersall, Gustavo Bounous : Breakthrough In Cell-Defense** before purchasing it in order to gage whether or not it would be worth my time, and all praised Breakthrough In Cell-Defense:

All eyes in the wellness movement are now focused on the antioxidant revolution and Glutathione (GSH) leads the pack. This book provides the reader with a comprehensive description of the role of glutathione and its secrets. It is the cells' supreme defense against viruses, toxins, free radicals, bacteria, etc. It is the key element for our immune system, one that has eluded doctors in practice until now. There are unfolding implications for both Health and Disease: AIDS, Cancer, Aging, Chronic Fatigue etc. Now the same key active proteins in breast milk have been identified in a unique whey protein concentrate, just as nature provided. The contemporary world is in need of and is waiting for such a universal boost to the immune system -- in both primary and secondary prevention. A new safe, effective, and conventional way to increase glutathione has immediate implications for YOU.
