From Hodder Education Publishers : Bruce-Chwatt's Essential Malariology (Hodder Arnold Publication)

before purchasing it in order to gauge whether or not it would be worth my time, and all praised Bruce-Chwatt's Essential Malariology (Hodder Arnold Publication):

3 of 3 people found the following review helpful. malaria in a nut shell By Khushal Jhaveri The book is all about malaria. It talks about the Vector i.e. the mosquito and the parasite, that causes malaria. Malaria is the most common disease in the tropics affecting people from Asia, Africa and the Americas. The book covers various topics like the symptoms of malaria, various control measures which itself are divided into Biological control, Chemical control and mechanical control. Various drugs that are to be used for combating the malarial parasite are given in details with the effectiveness of each against specific parasite. It is a book that in short covers the entire spectrum of Malaria.

This third edition of Leonard Bruce-Chwatt's classic handbook has been revised by a team of international experts. It has an increased clinical orientation which particularly emphasizes the use of chemotherapy in the management of the disease. There is also extensive updating of our rapidly advancing scientific understanding of parasitological, entomological, epidemiological, clinical and immunological aspects of malaria and its transmission. 'Essential Malariology' provides an indispensable practical guide for the physician dealing with the disease anywhere in the world and also offers invaluable advice to public health workers implementing malaria-control policies and to laboratory staff.

'Its admirable blend of up-to-date factual information, scholarly and authoritative comment and philosophical wisdom is applied to the whole range of human malariology...it has found a place in the research laboratory, the hospital and the consulting room as well as in the field worker's knapsack and the administrator's desk.' --Journal of Tropical Medicine and Hygiene (of the second edition)About the AuthorHerbert M. Gilles, Emeritus Professor of Tropical Medicine, University of Liverpool. David A. Warrell, Professor of Tropical Medicine and Infectious Diseases and Director of the Center for Tropical Medicine, University of Oxford.
