Rodney P. Anderson, Linda Young : Case Studies in Microbiology: A Personal Approach before purchasing it in order to gage whether or not it would be worth my time, and all praised Case Studies in Microbiology: A Personal Approach:

1 of 1 people found the following review helpful. Great resourceBy MbCase studies in every applicable area of microbiology. My students enjoyed the real life scenarios. Great book with great resources. I'd highly recommend!0 of 0 people found the following review helpful. An excellent book. A book every medical student must haveBy Syed Yousaf KazmiAn excellent book. A book every medical student must have. This book actually addresses the post graduate microbiology students yet it's simplicity of language and ease of grasping the knowledge make it a good book

for all medical professionals. Each case is written in a story like manner with a humane touch to it. The laboratory investigation part is a bit general. Study questions asked are very thought provoking but many questions remained unanswered in the book and author left it to the reader's knowledge and imagination. The only two areas of improvement in this book were: No.1, More detailed answers of the questions asked in the cases and No. 2, more scientific and elaborate description of laboratory tests. I have enjoyed this book very much and I strongly recommend this book for all the students and teachers who belong to medical profession.

This first edition text developed and evolved to meet three pedagogical goals we deemed essential for those studying allied health and are pre-professional. The use of microbiology case studies were modified to maintain their value as tools that result in critical thinking and knowledge retention while providing a more realistic context for preparing future health care professionals. Consequently, the text has real life, personally-oriented microbiology cases appropriate for those in nursing, pharmacy, and other allied health disciplines (pre-med, pre-PA, CLS, etc.). This format presents material as a story about the patient as well as information regarding their family circumstances, personal characteristics, and individual motivations.
