Marina Cohen : Cells (Let's Relate to Genetics) before purchasing it in order to gage whether or not it would be worth my time, and all praised Cells (Let's Relate to Genetics):

From insects to elephants, every living thing on this planet is made up of cells, the tiny building blocks of plant and animal life. Each cell is alive-and each has work to do! What do cells look like? How do millions and billions of cells work together to form one plant, one animal, or one human being? Guided by colorful photos, diagrams, and text, you can take a closer look at the amazing world of cell science-and see what's next.
