**Roger M Nocera M.D. : Cells That Heal Us From Cradle To Grave: A Quantum Leap in Medical Science**  
before purchasing it in order to gage whether or not it would be worth my time, and all praised Cells That Heal Us From Cradle To Grave: A Quantum Leap in Medical Science:

1 of 1 people found the following review helpful. Must read for everyone.By FHMReally good book...2 of 2 people

found the following review helpful. An immeasurable milestone contribution to cellular and functional medicine. By IrrationalmanKuddos and congrats Roger; you did it. You put your heart, soul, brilliance and passion out there yet again. Your contributions to cellular and functional medicine are immeasurable and will stimulate thinking and discovery for generations. I hope you saved those stream of consciousness raw video segments made when you were preparing to write this monumental achievement. Miss you my friend. Tom2 of 2 people found the following review helpful. A new life saving paradigm By Christopher Davis This book heralds a new era of medicine and needs to be heard and understood by everyone. A great book for the lay person and the medical professional that dispels the fears, eliminates the confusions and explains the life saving benefits that are economically available to you and your loved ones through this paradigm changing breakthrough.

Roger M. Nocera, M.D., a world leader in stem cell therapy research, announces a breakthrough medical science discovery that will revolutionize health care as we know it. In his new book "Cells That Heal Us From Cradle To Grave: A Quantum Leap in Medical Science," Dr. Nocera reveals that a medical science discovery made in 2003 has been developed in medical clinics around the world and proven to be effective in the treatment of many heretofore incurable diseases. Cells That Heal Us From Cradle To Grave explains how this medical science discovery is on a par with Immunology discovered two centuries ago with the smallpox vaccine, and with the discovery of antibiotics a century later. Dr. Nocera's book is a primer on how this amazing new medical technology will completely nullify our current medical health care and pharmaceutical research systems. Cells That Heal Us From Cradle To Grave explains that there is a class of stem cells that are naturally created by the human body which heal every disease and injury that attack our bodies. These Healing Cells are naturally present in every body, and are fully transplantable from one person to another without any threat of rejection. Treatments with Healing Cells is as simple as receiving an injection, and the cells are naturally found in stored body fat or umbilical cord medical waste. Healing Cells are NOT embryonic stem cells, which have turned out to be the very worst possible choice for stem cell research. To date, hundreds of patients have been successfully treated in offshore clinics offshore due to an FDA moratorium on stem cell treatments in the U.S. In this book Dr. Nocera calls for a lift of this ban to make this phenomenal medical science available to all Americans who suffer with numerous diseases and conditions that can now be successfully treated with Healing Cells. Although Americans spend 18% of our GDP on health care, over twice that of most Western countries, we are ranked 72nd in overall health of our citizens by the World Health Organization. As this Healing Cell Quantum Leap in Medical Science becomes widely available Dr. Nocera predicts that the ever rising costs of medical care in this country will diminish significantly and treatments will often actually cure the underlying diseases rather than merely mask the symptoms. Partial list of diseases and conditions successfully treated with Healing Cells: multiple sclerosis, rheumatoid arthritis, type 2 diabetes mellitus, autism, muscular dystrophy, cerebral palsy and spinal cord injury.
