Abul K. Abbas MBBS, Andrew H. H. Lichtman MD PhD, Shiv Pillai MBBS PhD : Cellular and Molecular Immunology, 8e (Cellular and Molecular Immunology, Abbas) before purchasing it in order to gage whether or not it would be worth my time, and all praised Cellular and Molecular Immunology, 8e (Cellular and Molecular Immunology, Abbas):

10 of 10 people found the following review helpful. this is a great text, fine illustrations and glossaryBy Peter B. ParnellStudying on my own...this is a great text, fine illustrations and glossary; using this in conjunction with Erridge's "Undergraduate Immunology" for tablets. 5 stars for Abbas0 of 0 people found the following review helpful. Great Study Tool!By Jarren OatesI've only read the first chapter, however, from the first chapter I can tell that it's the perfect book for for anyone who aspires to study Immunology. The text is very easy to understand and breaks down information into chunks that are easy to comprehend. The figures are very helpful as, well as the descriptions under

them. The book also comes with an access code for an online companion website which gives readers access to quizzes to test their knowledge of the material. There are also several other features available with the companion website. I am very pleased with my purchase. 4 of 4 people found the following review helpful. there's no better book for that task. By Max Linares This IS the book for understanding Immunology, there's no better book for that task, the layout is just plain incredible and very easy to read, even for those whose main language is not English. Every student should give it a read. It is that good.

Popular for its highly visual, straightforward approach, Cellular and Molecular Immunology delivers an accessible yet thorough understanding of this active and fast-changing field. Drs. Abul K. Abbas, Andrew H. Lichtman, and Shiv Pillai present key updates in this new edition to cover the latest developments in antigen receptors and signal transduction in immune cells, mucosal and skin immunity, cytokines, leukocyte-endothelial interaction, and more. With additional online features, this is an ideal resource for medical, graduate and undergraduate students of immunology who need a clear, introductory text for immunology courses. Develop a thorough, clinically relevant understanding of immunology through a clear overview of immunology with a distinct focus on the management of human disease. Visualize immunologic processes more effectively. Meticulously developed and updated illustrations, 3-dimensional art, and all-new online animations provide a detailed, visual description of the key immunologic and molecular processes. Grasp the details of experimental observations that form the basis for the science of immunology at the molecular, cellular, and whole-organism levels and draw the appropriate conclusions. Find information more quickly and easily through an organized chapter structure and a more logical flow of material. Access to StudentConsult and Evolve provides a rich online experience for students and instructors alike including searchable content, question banks, animations, and more. Glean all essential, up-to-date, need-to-know information about immunology and molecular biology through extensive updates that cover cytokines, innate immunity, leukocyte-endothelial interactions, signaling, costimulation, and more. Benefit from numerous new figures and tables that facilitate easier retention of the material; quick summaries of each chapter; and nearly 400 illustrations that clarify key concepts.

"A book that is now in its 8th edition is obviously one that has been found to be useful by students and instructors. This is one of the more popular choices among immunology books. For some students, it might provide more information than they need, but that depends entirely on the level of the course. In any event, it would surely be an excellent resource. Given the rapid changes in what we know about immunology, the need for this new edition should be obvious." - Marion C. Cohen, PhD (SUNY Downstate Medical Center) Doodys Score: 91 - 4 Stars! About the Author Abul K. Abbas, MBBS, Distinguished Professor and Chair, Department of Pathology, University of California San Francisco, San Francisco, California
