Hee-Jin Kim, Kyle K Seo, Hong-Ki Lee, Jisoo Kim : Clinical Anatomy of the Face for Filler and Botulinum Toxin Injection before purchasing it in order to gage whether or not it would be worth my time, and all praised Clinical Anatomy of the Face for Filler and Botulinum Toxin Injection:

1 of 2 people found the following review helpful. Five StarsBy Deborah DavisLove the book. Excellent pictures

This book, containing more than 200 cadaveric photos and 200 illustrations, aims to familiarize physicians practicing

botulinum toxin type A (BoT-A) and filler injection with the anatomy of the facial mimetic muscles, vessels, and soft tissues in order to enable them to achieve optimum cosmetic results while avoiding possible adverse events. Anatomic considerations of importance when administering BoT-A and fillers are identified and in addition invaluable clinical guidelines are provided, highlighting, for example, the preferred injection points for BoT-A and the adequate depth of filler injection. Unique insights are also offered into the differences between Asians and Caucasians with regard to relevant anatomy. The contributing authors include an anatomist who offers distinctive anatomic perspectives on BoT-A and filler treatments and three expert physicians from different specialties, namely a dermatologist, a plastic surgeon, and a cosmetic physician, who share insights gained during extensive clinical experience in the use of BoT-A and fillers.

The purpose is to discuss the anatomical considerations that are pertinent to safely administering injections of fillers and neuromodulators in the face and neck. The audience is physicians who administer these cosmetic services. This is a thoughtful book full of practical information on administering filler and botulinum toxin injections in the face and neck. The anatomic discussions are relevant to avoiding mishaps and are indispensable to any clinician providing these treatments. (Patricia Wong, Doody's Books, November, 2016) From the Back Cover This book, containing more than 200 cadaveric photos and 200 illustrations, aims to familiarize physicians practicing botulinum toxin type A (BoT-A) and filler injection with the anatomy of the facial mimetic muscles, vessels, and soft tissues in order to enable them to achieve optimum cosmetic results while avoiding possible adverse events.
