Ronald F van Vollenhoven : Clinical Therapy Research in the Inflammatory Diseases before purchasing it in order to gauge whether or not it would be worth my time, and all praised Clinical Therapy Research in the Inflammatory Diseases:

This unique textbook provides information on the dramatic advances taking place in the field of inflammatory (autoimmune) diseases and their therapies. Experts in many different medical fields allergology, dermatology,

gastroenterology, pulmonology, rheumatology etc. will describe the advances in our understanding of the most important inflammatory diseases linking basic science discoveries to the advances in therapeutics that have taken place over the past years and foreshadow even more dramatic changes which will occur in the years to come. This is a truly multi-specialty bench-to-bedside textbook that will enable readers to gain a wide-ranging but also solidly built understanding of the therapeutic areas of inflammatory diseases. Readership: Physician specialist or physicians-in-training treating patients with inflammatory diseases, researchers studying inflammatory diseases, graduate students in the fields of immunology and inflammation, advanced-level medical students, and those in the life sciences with a keen interest in the inflammatory (autoimmune) diseases.

From the Inside Flap This unique textbook provides information on the dramatic advances taking place in the field of inflammatory (autoimmune) diseases and their therapies. Experts in many different medical fields allergology, dermatology, gastroenterology, pulmonology, rheumatology etc. will describe the advances in our understanding of the most important inflammatory diseases linking basic science discoveries to the advances in therapeutics that have taken place over the past years and foreshadow even more dramatic changes which will occur in the years to come. This is a truly multi-specialty bench-to-bedside textbook that will enable readers to gain a wide-ranging but also solidly built understanding of the therapeutic areas of inflammatory diseases.
