**T. Palva, H. Ramsay, C. Northrop : Color Atlas of the Anatomy and Pathology of the Epitympanum** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Color Atlas of the Anatomy and Pathology of the Epitympanum:

This atlas gives a detailed documentation of the superior compartments of the middle ear. New microdissection approaches have been developed, most importantly anterior microdissection. In addition to the tympanic cavity, this approach allows a direct view into the anterior membrane of Prussaks space, the anterior surface of the tensor fold, and the supratubal recess, areas not explored earlier. The regular and hitherto unknown auxiliary aeration and drainage pathways are shown in detail. Aeration of Prussaks space is documented using both microdissection and serial

sections; these pathways from the mesotympanum or from the lower lateral attic are independent of the tympanic isthmus. The pathology caused by chronic inflammation on the aeration and drainage routes is also documented, and new surgical microdissection methods for removal of the tensor fold are described. The atlas is invaluable in the temporal bone laboratory for all residents learning anatomy and pathology of the middle ear compartments, and for the experienced otologist the photographic documentation gives reliable evidence of the variable structures in the epitympanic compartments.
