Allan F. Wiechmann, Celeste R. Wirsig-Wiechmann : Color Atlas of *Xenopus laevis* Histology before purchasing it in order to gage whether or not it would be worth my time, and all praised Color Atlas of *Xenopus laevis*

Histology:

The Color Atlas of "Xenopus laevis" Histology provides the first central source on the microscopic anatomy of cells, tissues, and major organs of the adult South African clawed frog, *Xenopus laevis*. For many years, *X. laevis* has been a highly popular experimental animal model in many areas of research. The recent development of transgenic *Xenopus* technology offers the promise that this animal model will be utilized more than ever before. The purpose of this book is to provide the active researcher with a central source of high quality light microscopic color images of the tissues of *X. laevis*, to aid in the identification of the cells and tissues of interest. Major features of this atlas include: *277 large, colorful, high resolution light microscopic images of cells, structures, tissues and organs; *Clear, detailed labeling of important structures in all images; *Concise, easy-to-read descriptions of histological organization and functions; *Colorful three-dimensional illustrations that simplify complex structure; *Detailed presentation of cranial structures and organization; *Easy-to-use cross-referenced index; *Bundled CD-ROM containing all images for easy downloading.
