0 of 0 people found the following review helpful. Somewhat helpfulBy JBThis book was helpful for reviewing general concepts, but histology is such a visual science that it was not great for reviewing for tests.0 of 1 people found the following review helpful. Five StarsBy FanisShipped on time with a quality as described.0 of 0 people found the following review helpful. Good for reviewing and memorizing key facts.By LDGood for reviewing and memorizing

key facts. It has only a few pictures, so not really helpful in the visual aspect of histology. But if you need to memorize particular facts and definitions for class or boards, this is a good book. Not really good for understanding the big concepts, but your textbook is for that. It is a question and answer format, so you use active recall when you study. Active recall is proven to be a very effective study method.

Maximum retention in minimum time! These "flashcards in a book" help you remember high-yield facts in the least amount of time possible "This is a wonderful book for students of medicine and the life sciences. The authors combine traditional topics in histology with core concepts in cell biology and medical physiology. The book is well organized and well written. This is the body of information that students of microscopic anatomy need to know to understand the foundations of clinical medicine and to succeed on future licensing examinations. 3 Stars."--Doody's Review Service Drawn from the perspectives of recent graduates fresh from their medical school and USMLE experience, Deja Review books focus specifically on what is essential for success on your course exams and the USMLE. Features: Active recall QAs facilitate real learning, not just memorization Vignettes at the end of each chapter put the material in clinical context Mnemonics and key words help you focus on core facts Content works in conjunction with larger course books Portable size makes them great for study on the go Everything you must know about Histology and Cell Biology to ace your exams: Connective Tissue, Bones and Cartilage, Blood, Muscle, Nervous System, Cardiovascular and Lymphatics, Respiratory System, Endocrine, Skin and Glands, Digestive System, Hepatobiliary System, Urinary System, Female Reproductive System, Male Reproductive System, Senses Cell Membrane Cell Nucleus Genes to Proteins Molecular Biology Techniques Organelles Vesicle Transport Cell Cycle Division Extracellular Matrix and Cell to Cell Interactions Cell Receptors and Signalling Pathways
