Winifred Gray MB BS FRCPath : Diagnostic Cytopathology, 2e before purchasing it in order to gauge whether or not it would be worth my time, and all praised Diagnostic Cytopathology, 2e:

The Society of Authors The Royal Society of Medicine Awards Highly Commended British Medical Association Awards Winner Diagnostic Cytopathology 2e provides the trainee and practicing pathologist with a comprehensive guide to the diagnostic applications of exfoliative and aspiration cytology. Adopting a systemic approach, it covers recognised normal and abnormal cytological findings encountered in a particular organ accompanied by appropriate histopathological correlations and consideration of possible differential diagnosis. Heavily illustrated throughout, Diagnostic Cytopathology 2e will prove to be a highly useful and practical resource for daily reference in any

laboratory.in-depth bench book that covers everyday diagnostic work. Provides the clinician with an accessible guide to diagnostic investigation and screening. Cytologic findings closely related to histology. Provides the general diagnostic pathologist in the interpretation and recognition of tissue samples. Each chapter provides a summary of major diagnostic criteria and discusses the pitfalls and limitations of cytology. Enables the clinician to use cytology services more effectively. Major revisions of the following chapters: Mesotheliomas, Malignant Breast Tumours, Lymph Nodes, The Pathogenesis of Cervical Neoplasia, Cervical intraepithelial neoplasia and Squamous Carcinoma of the Cervix. Brand new chapter on Automation which is increasingly important in cervical screening. Additional material on Thin Core Biopsy technique which is increasingly used in Breast Screening Program. Inclusion of new genetic markers in immunohistochemistry increasingly important in non-gynaecological areas. With 47 additional contributors.

It is brilliant...entries are well described and illustrated. The sections detailing manual techniques are surprisingly interesting and informative. I regard this book as an essential benchbook for all departmental cytoscreening and reporting rooms, and strongly recommend all interested individuals to purchase a copy.ACP News - Autumn 2004
