Fran Balkwill : Enjoy Your Cells (Enjoy Your Cells Series Book 1) before purchasing it in order to gage whether or not it would be worth my time, and all praised Enjoy Your Cells (Enjoy Your Cells Series Book 1):

3 of 3 people found the following review helpful. Highly recommendBy ryclost6SUCH a big hit! My 6-year-old loves this series so much that he is not only explaining the science to everyone he meets, but he's re-creating the "Bone" comic book series as "Cells" (complete with "germ creatures" instead of "rat creatures," etc.)The information is a good balance of interesting and detailed, but not over-complicated, and the graphics are bright and engaging.1 of 1 people found the following review helpful. This book rocksBy EvelynThat title is from my son, now 8. We got him this book when he was 4 and he was immediately taken by it. We (parents) are both molecular biologists and one of us ran across it at a meeting, where we picked it up. We have since bought gift copies for other children. It is by no means comprehensive, but it is entertaining and educational. FWIW, I brought it to his first-third-grade classroom and the fertilization part didn't trigger any questions about anatomy.From my son:My favorite page is the one with all the sperm swimming toward the egg. The one that gets in says "I'm spermastic." The pictures are good and it's a funny joke. The other sperms say "I can't swim," "Wait for us," "Let us in," "All this way for nothing!" and "Yeah."I also really like the next page, where the sperm that got in says "Now we are just one cell." The other sperms say "Sob," "Smug sperm," "Bah," and "We're too late."My other favorite part is where everyone is guessing how many cells are in a human. The dinosaur says "I thought I was made of Latex." I like it because it's a joke. Get it? The dinosaur thinks he's made of plastic.I like this book because I learned a lot and it is funny.0 of 0 people found the following review helpful. Great series!By Marathon MomMy almost- 5 year old loves these whole series of books and has me read and

re-read, and is talking with scientific vocabulary and asking questions that surprises other adults who I presume haven't seen these books. Great illustrations. Very happy I purchased, and I assume they will be in use for years to come!

Beneath your skin there is an amazing hidden world of living cells. Millions and millions of cells work together, to make everything that is you. But did you know that you started life as just one tiny cell? And did you know that everything that lives on Planet Earth is also made of these amazing cells? Enjoy Your Cells is a series of children's books from the acclaimed creative partnership of scientist/author Fran Balkwill and illustrator Mic Rolph. Once again, they use their unique brand of simple but scientifically accurate commentary and exuberantly colorful graphics to take young readers on an entertaining exploration of the amazing, hidden world of cells, proteins, and DNA. It's over ten years since Fran and Mic invented a new way of getting science across to children. Think what extraordinary advances have been made in biology in that time and how often those discoveries made headlines. Stem cells, cloning, embryo transfer, emerging infections, vaccine development—here in these books are the basic facts behind the public debates. With these books, children will learn to enjoy their cells and current affairs at the same time. And they're getting information that has been written and reviewed by working scientists, so it's completely correct and up-to-date. Readers aged 7 and up will appreciate the stories' lively language and with help, even younger children will enjoy and learn from the jokes and illustrations—no expert required! Discover all the books in the ENJOY YOUR CELLS series, each available in coloring book and full-color formats!

"The illustrations in Enjoy Your Cells are fantastic....this is no boring biology textbook. Rolph's illustrations are rich....and many have entertaining text bubbles....The book is jam-packed with information for both kids and parents. I'm a biologist and I learned new things from the book. Balkwill works hard to make all this material accessible to young minds...The book certainly made a lasting impression on my daughter....She...even asked to bring the book to her preschool. It's pretty neat to see how Enjoy Your Cells has given her a new way of looking at the living world." - Washington Post
About the Author Fran Balkwill is Professor of Cancer Biology at St. Bartholomew's Hospital and the London Queen Mary School of Medicine. Mic Rolph is a graphic designer with much television and publishing experience. Together, they have created many books for children, and have won several awards, including the prestigious COPUS Junior Science Book Prize.
